

Bring on **more acres.**

The LEXION 8000-7000.

The LEXION.

Brighter thinking means a brighter business for you.

Our passion for building combines dates back to 1936, and since then we have continuously shaped the history of harvesting technology. Indeed, no other company has played such a significant role as CLAAS in the development and innovation of today's combine harvesters. But there is more to what we do than advancing technology – we understand the needs of our customers. Much of what farmers and contractors tell us drives our development process to ensure our products fit the needs of their businesses. The demands of our changing world are also constantly driving us forward.

These drivers have made us what we are today: the business-minded manufacturer for the business-minded ag professional. And the partner of choice for revolutionary harvesting technology. We put our brightest thinking into cutting-edge products that help our customers save more time and make more money. So their businesses are even better than before.

This means the LEXION combine is much more than the latest model in the series. It is a combine that has been redesigned and redeveloped from the ground up in close cooperation with those who will use it as a tool to get more from each day and create their own success. Together, we have combined brighter ideas for our mutual benefit. These ideas not only come from our exacting nature and always wanting to improve – they are also the result of our sheer enthusiasm and passion for agriculture. Because we know that, together, this results in an even brighter future for us all.

Cathrina Claas-Mühlhäuser
Chair of the Shareholders' Committee

How do we innovate at CLAAS?

It's simple. By working continuously to make harvesting technology better, faster and more efficient. And, a little different, too.

Turning heads and acres in record time.

The CLAAS LEXION combine is an engineered mix of efficiency, precision and convenience – all in a reliable and easily-maintained package. Everything is designed with your efficiency in mind. Because we know that you can't put more hours in the day, but you can put in more acres.

We also know a LEXION combine isn't for everyone. It's for those with a plan. For those who want to take more control of their operation and do things the smartest way - not necessarily the way they've always been done. A LEXION combine is for leaders. Is it for you?

up to **657** hp

up to **510** bu

per class size

A machine that's as ambitious as you are.

APS SYNFLOW HYBRID

Like you, we don't spend a lot of time thinking about what everyone else is doing, because we know the status quo is often what holds you back. Brighter ideas always start by bringing fundamental change to the established way of doing things. In the case of the LEXION 8000-7000 combine, there are multiple advancements on board, including the new APS SYNFLOW HYBRID technology.

Replacing the APS HYBRID SYSTEM that was developed by CLAAS in 1995, the APS SYNFLOW HYBRID system was designed from the ground up to raise the bar on combine productivity. The highest capacity processor on the market got even bigger, and the combination of the APS SYNFLOW threshing system and ROTO PLUS separation system makes the APS SYNFLOW HYBRID system the throughput leader in every class. All this allows the LEXION combine to create unmatched efficiency without compromising the quality of your harvest.

30_{in}

1

Threshing cylinder size increased by 26% to further improve crop flow and grain quality.

More capacity

8

Enhanced rotor grates and additional cover plates increase rotor capacity and versatility.

Hydraulic concave blanking plate

2

Can be engaged from the cab to intensify threshing action.

24 in

3

Feed impeller size enlarged by 37% to further improve crop flow and grain quality.

Hydraulic intensive threshing segment

4

Can be engaged from the cab to intensify threshing action.

High-performance pre-separation

6

Pre-separate up to 30% of the crop before it reaches the threshing area.

MULTICROP

7

Complete crop conversion can take place from the cab.

Crop Flow

5

One-to-one feederhouse to threshing system width and straight line crop flow means crop isn't folded on itself before threshing, requiring less horsepower.

Convenience

Save time and money with minimal downtime between crops thanks to in-cab crop conversion capabilities and the fastest road speed for all models on the market.

Decrease daily maintenance time due to the central lubrication system and DYNAMIC COOLING.

STANDARD TRANSPORT SPEED

Efficiency

Harvest more acres per hour than any other combine on the market thanks to the capacity of the APS SYNFLOW HYBRID system.

Save money on fuel due to efficient machine design and DYNAMIC POWER.

A grain handling system that features the industry's largest grain tank and a faster unload speed, matched perfectly with the highest capacity processor per class size in the industry, means less unloads needed.

Precision

CEMOS AUTOMATIC autonomously and automatically makes real-time, in-field adjustments with more precision and speed than a seasoned operator. This results in individual threshing and separation speed adjustment capabilities allowing the operator to set the machine precisely for the crop and condition it is harvesting in - meaning minimal grain loss.

In-cab configuration adjustment capabilities give the operator complete control of crop flow settings on the fly.

CEMOS AUTOMATIC BY THE NUMBERS

Precision

Expect minimal downtime with a reliable machine and reliable dealer service.

93% of CLAAS LEXION customers are satisfied / highly satisfied with dealer service.

96% parts fill rate from CLAAS Parts.

The CLAAS On Your Farm Parts program allows owners to customize a selection of parts to keep on their farm to prevent downtime.

Pick up CLAAS parts from one of the 225 combine or parts dealership locations.

You find the land. We'll find the time.

The world's most productive combine continues to get even better. With the expanded capacity of the APS SYNFLOW HYBRID system, you'll get up to 10 percent more throughput. That, combined with the industry's largest grain tank and faster unloading speeds, creates a machine that's built to cut through acres. It's the only combine that can get more done in the same amount of time, without sacrificing the quality of what you get out of the field. The LEXION combine is how you get out in front of your harvest season and stay there.

APS SYNFLOW HYBRID.

- The enlarged threshing cylinder and feed impeller improve crop flow and grain quality
- 20% more threshing area
- Higher capacity rotor grates
- Achieve up to 10% more acres per hour

DYNAMIC POWER.

- Optimizes power and fuel consumption to ensure there is power when needed and fuel efficiency when not
- Results in the lowest possible fuel consumption - up to 31% lower than nearest competitors - and reduces overall operating costs
- Provides a power boost when unloading on the go to ensure productivity is not compromised

Grain handling system.

- Each combine model is offered with the largest grain tank available per class, ranging from 510 bu to 385 bu
- The unload speed matches the grain tank capacity, reaching up to 5.1 bu/sec
- The grain handling system enables a LEXION combine with a 30 ft header harvesting a crop up to 250 bu/a to travel 0.5 miles before unloading

Farming is a competition. This is how you win.

Everyone is looking for an edge, and the LEXION combine gives you the advantage you need. At the peak of precision is the CEMOS AUTOMATIC combine automation system that makes autonomous and automatic real-time in-field adjustments with more precision and speed than a seasoned operator. Equipped with more in-cab controls and on-the-fly adjustment capabilities, along with the highest-quality machine performance feedback, the LEXION combine makes certain you are always set up to succeed.

CEMOS AUTOMATIC.

- Released in 2013, CEMOS AUTOMATIC is the industry's most experienced combine automation system
- Autonomously and automatically controls combine settings and adjustments
- Self-learning system tests alternative settings to ensure the machine is running at maximum efficiency
- Allows for full, automatic machine optimization

Individual threshing and separation speed adjustment.

- The operator can more precisely adjust machine settings for changing crop conditions
- Superior operator control leads to less than 0.5% grain loss

Precise in-cab adjustments.

The LEXION combine features the most in-cab adjustment capabilities:

- Intensive threshing segment
- Concave blanking plate
- Rotor cover plates

Built to save you time and make you money.

The LEXION combine is designed to save you time and make your job easier. Boasting the industry's fastest transport speed, this machine not only gets you through the field faster, but it also gets you to the next field faster. In-cab conversion capabilities make it simpler and faster to switch between crops when needed. Daily maintenance time is shortened with features like the automatic central lubrication system, along with DYNAMIC COOLING. Your neighbors may not notice these creature comforts, but you certainly will.

Maintenance features.

- The industry-exclusive DYNAMIC COOLING system pulls cool, clean air from above the machine through the radiator, into the engine compartment, and down the side panels
- The central lubrication system greases the machine while it is warm and moving, ensuring up to 74 grease zerks receive the correct amount of grease at the correct time
- When comparing the time required to perform daily routine maintenance, the LEXION combine requires less than 50% of the time required by competitors

In-cab conveniences.

- In-cab dual range threshing speed adjustment allows the operator to switch from high to low speed range
- In-cab residue management speed adjustment allows the operator to switch from high to low speed range
- In-cab residue size control allows the operator to adjust particle size
- These exclusive in-cab adjustments reduce the time needed for crop conversion by more than 50%

Transport speed.

- The LEXION 8000-7000 series combines, from class 6 to class 10, TERRA TRAC or wheeled, have a top transport speed of 25 mph

For those who know the window isn't getting any wider.

When it's time to run, your equipment and the support behind it need to be ready to go. We put the LEXION 8000-7000 combine through more durability testing than ever before. Our On Your Farm Parts stocking program and in-field service support are designed to maximize your uptime, and our parts centers boast some of the best fill rates in the industry. Our focus on harvesting pays dividends for you, and has resulted in a 93 percent customer satisfaction rating for us.

On Your Farm Parts.

Have the parts you need, right where you need them. The CLAAS On Your Farm Parts program allows you to customize a selection of parts to keep on your farm in order to keep your machine running. CLAAS is committed to supporting your parts needs.

North American parts centers.

The CLAAS of America Parts Logistics Centers in Columbus, Indiana, and Regina, Saskatchewan, provide world-class parts throughout North America for all CLAAS products. They provide the CLAAS dealer network with reliable, consistent parts availability and industry-leading responsiveness. Whatever it takes.
